Slick Licks

David De Roure

Wolfson College, Oxford

COLLEGE

The Ambition

- Back in the late 1900s I was part of a jazz workshop helping people learn to play jazz.
- One of the exercises was called "slick licks" - we would sit in a circle and “trade licks” on our instruments.
- A big barrier for jazz learners can be finding people to play with.
- Q. Can I build a software system to enable people to practice their slick licks? And specifically… can a bass player use this?!
- It should listen and respond, sometimes lead, be realistic enough to be useful.
- NB This is like a highly interactive play-along for practice purposes, but it's not intended to replace a human player: human interaction was key to slick licks!

All the things I have been* thinking about

Phrase analysis

Question and answer

Leadership & role swapping

Contour steering

Chord conditioning

Harmonic modes

Scale pitch bias

Pitch range

Swing / triplet feel

Live tempo tracking

Dynamics

Articulation

Bass pitch-class tracking

Energy arc

Motivic development

Lyrical motif re-use

Voice leading

Modal leap bonus

Stochastic thinning

Phrase breathing

Singable duration bias

Rhythmic density

Rhythmic complementarity

Register contrast

Phrase length control

Beat-matching / trading bars

Ostinato

Proactive mode

Arc timing

Phrase-shape dynamics

** Good name for a song?*

5 minute arc

1. Sparse
   - Open, sustained, establish motifs slowly
2. Building
   - Mixed, lines begin to flow
3. Peak
   - Fast, active, max rhythmic intensity
4. Recapitulation
   - Lyrical return, recall themes with space
5. Resolution
   - Slowest, long tones, fading out

Potential limitations of the chosen approach

- Time feel might be mechanical – lack of microtiming
- Conversation might be too polite
- No personal voice
- Arc is clock-driven, not music-driven
- Motivic development might feel like repetition
- It uses MIDI, so perhaps it inevitably sounds like a very good MIDI file but there'll be a lack of expression/articulation
